Continuous insulation under your slab eliminates thermal bridging, increasing your total effective RSI/R-value. This reduces energy costs and increases your energy savings.

Features & Benefits

- Meets all building code requirements
- Meets CAN/ULC-S701, Type 1
- Long term RSI 0.65/25 mm (R-value 3.75/inch)
- Compressive Resistance: 10 psi
- Closed cell insulation resists moisture
- CCMC 12424-L
- Custom sizes available

Energy Tip

Continuous insulation under your slab eliminates thermal bridging, increasing your total effective RSI/R-value. This reduces energy costs and increases your energy savings.
Follow these simple How-to steps to install your DuroFoam insulation for an insulated basement floor.

1. Follow the building code.
   Be sure to follow the building code requirements applicable in your region.

2. Moisture Barrier.
   Place & level a layer of granular fill. Place a 6-mil polyethylene moisture barrier over the granular fill.

3. Place DuroFoam Insulation.
   When placing the insulation ensure that the joints are tightly butted together. (HINT: Ensure all openings are planned in advance.)
   The green face of DuroFoam insulation should face up to make use of the markings for ease of cutting insulation and spacing nailers.

4. Place the Concrete.
   Install reinforcement as required. Place the concrete using normal construction methods and equipment.
