DuroFoam® Insulation EXTERIOR INSULATING SHEATHING

See step-by-step instructions on reverse.

Features & Benefits

- Meets all building code requirements
- Meets CAN/ULC-S701, Type 1
- Long term RSI 0.65/25 mm (R-value 3.75/inch)
- Compressive Resistance: 10 psi
- Closed cell insulation resists moisture
- CCMC 12424-L
- Custom sizes available

Energy Tip

Continuous insulation over your exterior walls eliminates thermal bridging, increasing your total effective RSI/R-value. This reduces energy costs and increases your energy savings.

DuroFoam® Insulation **EXTERIOR INSULATING SHEATHING**

Continuous insulating sheathing over the exterior eliminates thermal bridging and reduces air infiltration.

requirements applicable in your region.

Apply the insulating sheathing board over

the exterior of wood framing with all

vertical edges of boards butted tightly

* The green face of DuroFoam insulation should face out to make use of the markings on this face provided for easy cutting and

framing using fasteners with heads or washers at least 1/2'' diameter where the cladding will be applied directly against the insulation. Fasteners with heads or washers at least 1" diameter must be used where an air space will exist between the insulation board and the cladding (e.g. brick cladding).

Use correct fasteners.

Install exterior cladding.

• Follow cladding manufacturer instructions and building code requirements for installation of exterior finishing materials.

NBC 2005, Table 9.23.16.2.A./NBC 2010 Table 9.23.17.2.A. Wall Continuous Insulating Sheathing Thickness and Specifications Forming part of NBC 2005 Sentence 9.23.16.2.(1)/NBC 2010, Sentence 9.23.17.2.(1)

	Minimum Thickness, mm See Note 1 Below		Material
Type of Sheathing	With Supports 400 mm o.c.	With Supports 600 mm o.c.	Standards CAN/ULC-S701
DuroFoam Insulation	38	38	Type 1

1. Minimum thickness applies for insulating sheathing when exterior walls and gable ends must be sheathed when the exterior cladding requires intermediate fastening between supports or if the exterior cladding requires solid backing.

2. Where wood shingles or shakes are applied over insulating sheathing, the shingles or shakes must be attached to a wood lath not less than 38 mm by 9.5 mm thick securely nailed to the framing. 3. Minimum thickness of continuous insulating sheathing applied to the exterior of wood frame walls must also comply with regional requirements for ratio of outboard to inboard thermal resistance (see Plasti-Fab PIB 287 for additional guidance.
